These P.O.'s are to standardize all of Photo onto the PERRIER system. Kevin has successfully demonstrated this software on DNS/NSR8 and it worked very well. It will improve Photo throughput by 10% or more by eliminating the dead time waiting for operator to start the Nikon recipes. It will also improve operator productivity (we may be able to operate up to 4 stepper-track cells with one operator.) Vickie Lara and operators saw it in operation and are very excited about installing it throughout Photo (except on DNS 7 which is the Model 629 track.)

Thanks. Dave
